EDUCATION

Georgia Institute of Technology

B.S in Computer Science (Intelligence & People)

Atlanta, GA

May 2028

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Organization, Machine Learning, Artificial Intelligence, Software Engineering, Linear Algebra, Multi-variable Calculus, Discrete Math, and Probability & Statistics

EXPERIENCE

Research Lead & Software Development Engineer

GT Baseball Analytics (VIP)

Jan 2026 – Present

Atlanta, GA

- Migrated a dashboard to a static AWS S3 frontend, processing 10,000+ pitch and hit events to deliver defensive insights
- Built AWS Lambda backends powering pitch sequencing visualizations across 12-count scenarios to identify performance trends
- Optimized defensive models via reaction time and route efficiency analysis, securing the app with CloudFront and Cognito
- Provisioned Terraform infrastructure and built automated Parquet/CSV to PostgreSQL pipelines, reducing manual reporting by 70%

Data & Software Development Intern

Alvi Satellites

May 2023 – May 2025

Berkeley Lake, GA

- Developed Python/Pandas data pipelines processing 5,000+ hotel and ownership records, automating workflows and reducing processing time by 75%
- Engineered lead scoring algorithms ranking 900+ hotel prospects using engagement metrics, reducing lead qualification time by 50%
- Designed and optimized SQL databases managing 1,000+ client interactions, improving data reliability and customer tracking systems
- Automated reporting workflows generating business analytics insights, reducing manual analysis and improving operational visibility

Co-Founder / Software Engineering Lead

FIRST Robotics Competition – Lambert High School

Aug 2023 – May 2025

- Founded software division for school's first FRC team, scaling organization to 90+ members and establishing development workflows for robotics software, controls, and testing
- Engineered 15+ autonomous control systems with sensor integration and motion planning, boosting robot reliability by 30%+
- Built, tested, and debugged embedded software across 3 competition robots, reducing issues through iterative validation
- Managed cross-functional software integration engineering teams, delivering reliable systems for 20+ matches

PROJECTS

NBA Analytics & Prediction Engine | *Python, Pandas, Scikit-learn, nba_api, The Odds API*

Mar 2026 – Present

- Built end-to-end data pipelines ingesting 10,000+ NBA games, 50,000+ player-game records, and live betting data from external APIs
- Engineered 15+ predictive features including team efficiency, matchup statistics, rolling averages, and usage rates
- Developed machine learning models predicting game outcomes with 67% accuracy and player stat projections using historical performance trends
- Implemented probability and expected value models to identify mispriced player props and generate matchup-based analytics insights

Movie Recommendation System (Full-Stack ML Platform) | *Python, FastAPI, Scikit-learn, JavaScript*

June 2026 - Present

- Built a TF-IDF based recommender converting 1,000+ movies into high-dimensional feature vectors for similarity modeling
- Engineered a cosine similarity matrix over 1,000+ items to generate real-time ranked recommendations using vector space distance
- Developed a FastAPI backend exposing 3+ REST endpoints with sub-second latency for recommendation and data retrieval
- Built a full-stack frontend enabling interactive movie selection and real-time display of recommendations from API responses

AI Smart Scheduler | *React, Node.js, MongoDB, OpenAI API*

Jan 2026 – Present

- Developed an AI-powered scheduling platform optimizing tasks based on deadlines, priorities, and user constraints
- Built a real-time conflict resolution engine that dynamically adjusts overlapping tasks in response to user updates
- Implemented NLP-based parsing to convert natural language inputs into structured scheduling workflows
- Integrated authentication and Google Calendar APIs for seamless cross-platform task synchronization

HCP Engagement API | *Python, Flask, React, Docker*

Sep 2025

- Built a secure Flask REST API with JWT authentication to power an AI-driven clinical literature co-pilot system
- Integrated PubMed and Groq APIs into an automated data pipeline for rapid, LLM-based clinical text synthesis
- Containerized the backend services with Docker to streamline dependencies and ensure consistent local development execution
- Streamed AI responses to a React frontend in real time via WebSockets, minimizing perceived user latency during complex queries

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks/Libraries: React, Next.js, Node.js, Express.js, FastAPI, Flask, Streamlit, Pandas, NumPy, Scikit-learn, PyTorch

Databases & Cloud: PostgreSQL, MySQL, MongoDB, Supabase, AWS (Lambda, Lightsail, Amplify), Firebase

Developer Tools: Git, GitHub, Docker, VS Code, PyCharm, Postman, Jupyter Notebook, CI/CD, REST APIs
